Lithium Battery Pyrolysis Furnace is a device used to process waste lithium batteries. It uses a high-temperature pyrolysis process to decompose the positive electrode, negative electrode, electrolyte and other substances in the waste lithium battery, thereby recovering the useful metals and materials. During the pyrolysis process, waste lithium batteries will be heated to high temperatures, causing the materials in them to decompose into gases, liquids and residues. Through further processing and processing, the lithium, cobalt, nickel and other metals can be recovered, and the waste lithium batteries can be realized at the same time. Resource utilization and environmentally friendly treatment. Lithium Battery Pyrolysis Furnace helps solve the problems of waste lithium battery processing and resource recovery, and promotes the recycling of waste resources.
