## Abstracts

The global Lithium Battery Recycling Solution market size is predicted to grow from US\$ 2614 million in 2025 to US\$ 3798 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

To address the problems of low processing efficiency, high environmental pollution risks, and serious waste of precious metal resources in traditional lithium battery recycling methods, lithium battery recycling solutions have emerged. Since the rise of the new energy vehicle industry and the large-scale application of lithium batteries in the early 21st century, the field of power battery cascade utilization and recycling has developed significantly. Currently, lithium battery recycling solutions have evolved into a professional technical system encompassing multiple technical routes, including physical dismantling and recycling, hydrometallurgical recycling, and pyrometallurgical recycling. These solutions are widely used in the treatment of retired power batteries in new energy vehicles, the recycling of consumer electronics batteries, and the battery cycle management of energy storage power stations, significantly improving resource recycling rates and promoting the sustainable development of the new energy industry.

As a key closed-loop link in the new energy industry chain, lithium battery recycling solutions are undergoing a transformation from 'extensive recycling' to 'intelligent and green' methods. In the future, technological integration (AI, biometallurgy, automation), ecological collaboration (automakers-recycling companies-material plants), and policy-driven initiatives will become key growth engines. Enterprises need to balance technological innovation and cost control, address the challenges of lack of standards and chaotic distribution channels, and seize incremental opportunities such as policy dividends, market demand, and technological breakthroughs. They must build a 'safe, efficient, and green' recycling system to drive the global battery industry towards a

circular economy model and contribute to the achievement of 'dual carbon' goals.
