The global Lithium Battery Vacuum Drying Machine market size is predicted to grow from US$ 872 million in 2025 to US$ 1201 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In the production and manufacturing of lithium batteries, if the moisture cannot be handled well, the water in the battery will be flammable and explosive, posing a great threat to the safety of the battery and the whole vehicle. Therefore, dehydration becomes a key point in the manufacturing process of power batteries.

According to existing technologies, attached moisture and adsorbed moisture are relatively easy to drain. The most difficult to absorb is combined moisture, also known as crystal water. It needs to be adsorbed by high temperature in a high vacuum state. The higher the temperature and the higher the vacuum degree, the higher the drying efficiency. This report focuses on vacuum drying equipment.

From the perspective of structure, the current drying equipment mainly includes tunnel furnace drying furnace, single-unit drying furnace and combined drying furnace. Among them, the tunnel furnace drying method is suitable for single battery batch production; the single-machine combined drying furnace is more flexible, and the demand gradually increases with the different battery varieties. From the perspective of heating methods, there are mainly air transport, contact and other heating methods.

With the advent of the TWh battery era, higher equipment capacity, smaller equipment footprint, more energy-saving large-scale production, lower operating costs and more convenient maintenance have gradually become new demands of battery companies for equipment.

The average price of drying equipment is US$200K-800K.

The market for drying machine in the context of lithium batteries is a segment within the energy storage industry. As lithium-ion batteries continue to play a pivotal role in various applications, including electric vehicles and renewable energy storage, the demand for efficient and reliable drying equipment has surged. Drying machine is essential in the manufacturing process of lithium-ion batteries, ensuring the removal of moisture and contaminants during electrode fabrication and cell assembly. The future development of drying machine for lithium batteries is expected to focus on improving energy efficiency, reducing production costs, and enhancing automation capabilities. Innovations may include advanced drying technologies to optimize the drying process and meet the increasingly stringent quality standards in the lithium battery industry. As the demand for lithium batteries continues to rise, driven by the growing electric vehicle market and renewable energy projects, the drying machine market is likely to witness sustained growth and advancements in technology to meet the evolving needs of battery manufacturers.
