Lithium battery vacuum oven is a device specially designed for the production and research and development process of lithium batteries, usually used for drying, curing, degassing and other treatments of battery cells, components or battery materials of lithium batteries. It uses a vacuum environment to meet these process requirements by controlling temperature and humidity, ensuring the quality and performance of lithium batteries. The core principle of a lithium battery vacuum oven is to use a negative pressure environment to lower the boiling point of water, thereby accelerating the drying speed. After heating at normal pressure for a period of time, the moisture in the battery or electrode is converted into water vapor; After the evaporation of water, vacuuming can extract the water vapor; Fill nitrogen to break the vacuum and maintain a dry environment.

United States market for Lithium Battery Vacuum Oven is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Lithium Battery Vacuum Oven is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
