The global Lithium Butadiene Rubber (Li-BR) market size is predicted to grow from US\$ 402 million in 2025 to US\$ 557 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Butadiene rubber (BR) is the abbreviation for cis-1,4-polybutadiene synthetic rubber. It is a universal synthetic rubber synthesized using butadiene as a monomer, different catalysts, and polymerization methods. It has the advantages of good elasticity, strong wear resistance, good low-temperature resistance, good crack resistance, and dynamic performance. It is widely used in the production of rubber products such as tires, high impact polystyrene and ABS resin modification, adhesive tapes, rubber hoses, and rubber shoes. Lithium butadiene rubber uses lithium based catalysts.

The main downstream consumption areas of lithium based butadiene rubber are in plastic modification and tire direction, with a significantly higher proportion of application in the plastic modification industry than in the tire industry. The main application product directions are HIPS and ABS industries. With the continuous development of the automotive industry, the demand for tire performance is also increasing, which has led to a continuous rise in the market demand for high-end radial tires. As important plastic materials, ABS and HIPS have also driven the market demand for lithium based butadiene rubber due to their demand for rubber modification.
