The global Lithium Cobalt Oxide Powder (LCO Powder) market size is predicted to grow from US\$ 2935 million in 2025 to US\$ 5440 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

Lithium cobalt oxide powder is an inorganic compound material with a layered crystal structure. Cobalt is the main active element, and it is a classic cathode active material primarily used in the manufacture of high-volume energy density small lithium-ion batteries. The core demand stems from the consumer electronics market's extreme pursuit of 'high volumetric energy density' in batteries, aiming to achieve longer battery life within the confined spaces of smartphones, laptops, and wearable devices. Its high compaction density and stable high-voltage platform perfectly meet this essential requirement. Its upstream supply chain is a typical fine chemical and mining industry, relying on a stable supply of precursors such as high-purity lithium carbonate and cobalt tetroxide, as well as strict co-precipitation, high-temperature sintering, and pulverization and grading processes. Downstream, it directly connects to the manufacturing of high-end consumer lithium-ion battery cells, where battery manufacturers process it into electrodes and assemble them into cells, ultimately supplying global consumer electronics brands. In 2025, the production of lithium cobalt oxide powder is estimated at approximately 100,000 tons, with an average selling price of approximately US\$30/kg, a gross profit margin of approximately 20%, and a single-line capacity of approximately 3,000 tons/year.

United States market for Lithium Cobalt Oxide Powder (LCO Powder) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
