Lithium-ion glass scintillation crystals are inorganic scintillation materials doped with lithium isotopes (primarily ${}^7\text{Li}$). They generate visible light signals upon neutron incidence and are commonly used in high-sensitivity detection scenarios such as thermal neutron detection, nuclear radiation measurement, and neutron imaging.

Upstream applications mainly include ${}^7\text{Li}$ isotope raw materials, high-purity glass substrates, dopants, and high-temperature melting equipment. Downstream applications include neutron detectors, nuclear power and nuclear safety monitoring, scientific instruments, national defense and security inspection, oil and gas logging, and neutron imaging systems.

In 2025, the global price of lithium-ion glass scintillation crystals was \$8,259/kg, with annual sales of approximately 13.78 tons, a global annual production capacity of 15 tons, and an industry profit margin of 30%.

United States market for Lithium Glass Scintillation Crystal is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
