## Abstracts

The global Lithium-ion Battery for Uninterruptible Power Supply (UPS) market size is predicted to grow from US\$ 1251 million in 2025 to US\$ 2011 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

Lithium-ion Battery for Uninterruptible Power Supply (UPS) are core energy storage components specially designed for UPS systems, mainly adopting lithium iron phosphate (LiFePO<sub>4</sub>) chemistry with integrated Battery Management System (BMS). They switch to power supply within milliseconds during mains outage, voltage surges, sags or harmonic disturbances, ensuring continuous operation of data centers, industrial controls, medical and financial equipment. Compared with traditional lead-acid batteries, they feature higher energy density, longer cycle life, higher charging/discharging efficiency, lower maintenance, deep discharge capability and fast recharging. Suitable for rack-mounted, modular and industrial UPS models, they serve as the core solution for lead-acid to lithium conversion in mission-critical power supply, balancing safety, long-term reliability and total cost of ownership. In 2025, the global price range for Lithium-ion Battery for Uninterruptible Power Supply (UPS) was approximately 120-285 US\$/kWh, with an average industry gross profit margin of around 18%.

Lithium-ion Battery for Uninterruptible Power Supply (UPS) are evolving from a 'lead-acid alternative' to an essential component of critical power supply systems. The core drivers are no longer merely space saving and reduced maintenance, but meeting the comprehensive requirements of high reliability, high power density, rapid recovery and intelligent operation and maintenance in scenarios such as data centers, AI computing centers and telecommunication equipment rooms. Industry competition is also shifting from individual cell performance to system-level capabilities, including BMS, fire safety,

thermal management, cabinet integration, compatibility with UPS hosts, and full lifecycle services. The future market will prioritize the 'high safety + high power + high integration' approach. Enterprises with in-house cell manufacturing, system integration, certification capabilities and project delivery experience will hold greater advantages, while manufacturers lacking scenario-specific insights and only producing general energy storage or consumer-grade lithium batteries will find it increasingly difficult to enter the high-barrier critical backup power market. Public materials from Eaton, Saft, Samsung SDI and others all indicate that lithium-ion batteries for UPS continue to deepen penetration into critical infrastructure and data center applications.
