Lithium-ion Battery Manufacturing Dust Collectors are devices used to control and collect dust and particulate matter generated during the production and recycling of lithium batteries. In the process of lithium battery production and recycling, some dust-generating links are involved, such as material cutting, grinding, coating, pressing and other operations. At the same time, some chemical gases and dust are also generated, such as lithium nickel manganese cobalt oxide, Electrolyte, etc. If these dusts and particles are not controlled and treated, they may have an impact on the production environment and the health of employees.

The global Lithium-ion Battery Manufacturing Dust Collectors market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
