The global Lithium-Ion Battery Separator market size is predicted to grow from US\$ 4117 million in 2025 to US\$ 6567 million in 2031; it is expected to grow at a CAGR of 8.1% from 2025 to 2031.

A battery separator is a polymeric membrane placed between the positively charged anode and negatively charged cathode to prevent an electrical short circuit. The separator is a microporous layer that is moistened by the electrolyte that acts as a catalyst to increase the movement of ions from one electrode to the other electrode. When the battery is charging the ions move from cathode to anode and when the battery gets discharged the ions will move in the reverse direction. The separator controls the number of ions moving between the positive and negative terminal and hence it is responsible for the leakage of ions (self-discharge) when the battery is ideal. Although the ions pass through the separator freely it will not have any electrical conductivity and it always acts as an isolator.

Global lithium-ion battery separator key players include Asahi Kasei, Toray, SK Innovation, UBE, etc. Global 5 major manufacturers hold a share about 60%. China is the largest market, with a share about 45%, followed by Japan and South Korea, both have a share over 40%. In terms of application, the largest application is consumer electronics, followed by power vehicle, etc.
