Lithography Gas Mixtures is an electronic gas mixture of different gases in different proportions, mostly rare gases, or a mixture of rare gases and fluorine. After being excited by high voltage in the cavity of the photolithography machine, electron transitions generate light of a certain wavelength. These lights are aggregated and filtered to form the light source of the photolithography machine, which directly determines the resolution range of the photolithography machine. Common rare gas mixtures include Ar/F/Ne mixed gas, Kr/Ne mixed gas, Ar/Ne mixed gas, Kr/F/Ne mixed gas, Ar/Xe/Ne mixed gas, etc.

United States market for Lithography Gas Mixtures is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
