Littrow prisms are optical components consisting of a right-angle prism with a reflective coating on one of its faces, positioned such that light entering the prism is internally reflected at the coating-prism interface and exits the prism parallel to the incident light direction. This configuration produces a deviation angle of 180 degrees between the incident and exiting light beams, making Littrow prisms useful in various optical setups, including spectrometers, lasers, and wavelength selection applications.

The global Littrow Prisms market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
