The global Live Attenuated Veterinary Vaccines market size is predicted to grow from US\$ 431 million in 2025 to US\$ 756 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

In 2025, global Live Attenuated Veterinary Vaccine approximately 16,943 k doses, with an average global market price of around US\$ 26 per dose. Gross margin is about 47%. The cost is 14 usd. The Production is about 25,000 k doses. Live attenuated veterinary vaccines are biological products used to prevent infectious diseases in animals. They are made from pathogens that have been artificially weakened so that their disease-causing ability is greatly reduced while their capacity to stimulate an immune response remains. These vaccines usually provide strong and long-lasting immune protection and are widely used in poultry, swine, cattle, sheep, companion animals, and other animal disease prevention programs. Compared with inactivated vaccines, live attenuated vaccines often require lower doses and can induce faster immune responses, but they also require stricter control over production, storage, transportation, safety, and stability.

Live attenuated veterinary vaccines will develop toward greater safety, stability, precision, and efficiency. As large-scale farming and animal disease prevention requirements continue to rise, manufacturers will focus more on attenuation stability, duration of immunity, cross-protection, and cold-chain stability to reduce risks such as reversion to virulence, shedding, and environmental transmission. At the same time, genetic attenuation, reverse genetics, vector-based vaccines, and multivalent combination vaccines will drive product innovation, enabling broader protection against multiple pathogens or serotypes. In application, mass vaccination methods such as spray, drinking water, and intranasal delivery will become more widely used and integrated with digital disease monitoring and precise vaccination programs to improve

efficiency across poultry, swine, cattle, sheep, and companion animal markets.
