A Live-Cell Metabolic Analyzer is a laboratory instrument designed to evaluate cellular metabolic activity in real time by measuring oxygen consumption rate, extracellular acidification rate and other metabolic parameters. It enables researchers to investigate mitochondrial function, glycolysis, energy metabolism and cellular responses under physiological conditions. The system is extensively used in cancer biology, immunology, stem cell research, drug discovery and metabolic disease studies. It is dedicated to live-cell functional analysis rather than conventional biochemical testing.

The upstream supply chain includes biosensors, microfluidic consumables, optical modules, electronic components, software and precision mechanical assemblies. Midstream activities include instrument integration, calibration, software development, consumable manufacturing and quality assurance. Downstream demand comes from pharmaceutical companies, biotechnology firms, universities, research institutes, hospitals and contract research organizations. Industry growth is driven by precision medicine, cell therapy development and increasing investment in life science research.
