## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information covers the present scenario (with the base year being 2017) and the growth prospects of global Live Cell RNA Detection market for 2018-2023.

RNA plays an important role in cell and tissue development as well as disease progression thus it is considered to be a major target for analysis of various diseases and disorders. In RNA detection, the study gets done to understand the gene expression patterns and determine the roles of genomic elements in cellular function and dysfunction. In live cell RNA detection, a study of the live cell gets done to understand that how one cell within a population responds to its environment. In live cell detection various techniques used to detect specific mRNA and microRNA in live cells while leaving the cells undisturbed and intact for further analysis. It also allows dissection of cell in RNA metabolism, RNA transcription, post-transcriptional processing, post-transcriptional regulations, nuclear export and RNA decay.

Over the next five years, LPI(LP Information) projects that Live Cell RNA Detection will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
