Live Feeder Bugs and Insects refer to commercially bred live insects and small arthropods used as feed sources for pets, laboratory animals, aquaculture species, and captive wildlife. These live feed organisms are artificially raised, processed, and supplied to provide natural protein and essential nutrients for animals such as reptiles (lizards, snakes, turtles), amphibians (frogs), ornamental fish, birds, small mammals, and research animals. Common feeder insects include crickets, mealworms, superworms, dubia roaches, silkworms, locusts, and fruit flies. Due to their high protein content, strong palatability, and similarity to natural diets, live feeder insects have become an important category in the exotic pet industry, professional animal breeding, and laboratory research markets.
