The global Liveness Detection API market size is predicted to grow from US\$ 243 million in 2025 to US\$ 363 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

Liveness Detection API is a standardized, programmable biometric anti-spoofing interface that abstracts the complex logic of verifying living biological subjects—including multi-modal biometric feature capture, physiological/dynamic trait analysis and fake detection—into unified, easy-to-call commands, eliminating the need for developers to build foundational algorithms from scratch. Serving as a technical bridge for integration with third-party apps, terminals and systems, it supports RESTful/gRPC protocols and local/cloud deployment, offers cross-platform compatibility, adheres to data privacy regulations with built-in encryption and on-device processing, and enables lightweight embedding of liveness verification into all biometric scenarios (facial, fingerprint, iris, etc.). It returns structured real-time results (pass/fail, confidence scores) to defeat spoofing attacks, acting as a core security barrier to boost the reliability of biometric identity authentication.

United States market for Liveness Detection API is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
