The global Livestock Animal Rehabilitation Services market size is predicted to grow from US\$ 204 million in 2025 to US\$ 454 million in 2032; it is expected to grow at a CAGR of 12.3% from 2026 to 2032.

The occurrence of traumatic injuries in livestock animals and maintaining their welfare are some of the major concerns among farmers. Traumatic accidents in farms may cause unpleasant emotional impacts and painful wounds on animals, also leading to fear of further possible trauma. Therefore, routine veterinarian examination and post-wound care therapies are important in evaluating both the physical and mental health state of animals. In addition, often transportation of animals and the environment of farms with unsuitable floors, inadequate maintenance, and damaged facilities, may pose risks to farm animal injuries.

The market is primarily driven by the rising livestock population in developing countries, growing awareness about the benefits of rehabilitation modalities in livestock treatments, and increasing adoption of physical therapy among injured farm animals to accelerate healing. In addition, government-sponsored livestock rehabilitation organizations and foundations are increasing in developing regions, which further propels the growth of the market.
