The global Livestock Healthcare market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Livestock healthcare refers to the development of health-building and illness prevention, detection, and management strategies that support the health and welfare of farm animals. They are used for improving the health, welfare, and productivity of livestock.

The increasing prevalence of food-borne and zoonotic diseases is expected to propel the livestock healthcare market going forward. Foodborne refer to infectious diseases caused by the consumption of food or water contaminated by pathogenic microorganisms such as bacteria, parasites, and viruses. Zoonotic diseases are illnesses that transmit between animals and humans. Livestock healthcare helps to detect, prevent and treat diseases from the animals through vaccines and medications, so increasing food-borne and zoonotic diseases increases the demand for the livestock healthcare products.
