The global Livestock and Poultry Ventilation Control System market size is predicted to grow from US$ 961 million in 2025 to US$ 1797 million in 2032; it is expected to grow at a CAGR of 9.5% from 2026 to 2032.

Livestock and poultry ventilation control systems are intelligent equipment systems used for environmental control in livestock farms. Using sensors to monitor temperature, humidity, hazardous gas concentrations, and air velocity in real time, they coordinate controls such as fans, wet curtains, roller blinds, and heating equipment to ensure air circulation and environmental stability within livestock and poultry houses, thereby improving farming efficiency and animal health. Their upstream suppliers primarily include suppliers of components and technologies such as sensors, fans, motors, controllers, and intelligent software. Their downstream customers include livestock and poultry farms, breeding groups, and providers of integrated smart farming solutions. These systems are widely used in large-scale farming operations, including those for pigs, poultry, and cattle. On average, one ventilation control system is required for every 10,000 broiler poultry. In 2024, the average price of a livestock and poultry ventilation control system was US$11,100 per unit, with production reaching 81,171 units. Production capacity was 128,800 units, with a capacity utilization rate of approximately 63% and a gross profit margin of 28%.
