Lithium manganese iron phosphate ( $\text{LiMn}_x\text{Fe}_{1-x}\text{PO}_4$ ) is a new type of phosphate-based lithium-ion battery cathode material formed by doping a certain proportion of manganese (Mn) on the basis of lithium iron phosphate ( $\text{LiFePO}_4$ ). Through the doping of manganese, on the one hand, the advantages of iron and manganese can be effectively combined, and on the other hand, both manganese and iron are located in the fourth subgroup of the periodic table and are adjacent to each other, with similar ions Radius and some chemical properties, so doping will not significantly affect the original structure.
