LNG Cryogenic Loading Arm is mechanical structures that facilitate the transfer of liquid substances or liquefied gasses from one tank to another. They can be described as a pipe system that includes both rigid pipes and swivel joints that help articulate the system. A common configuration includes three pipes: inner arm, outer arm and drop pipe, all of them connected by swivel joints. Additionally, they can be mounted on plates attached to a wall or mounted on a column. As piping is often made of heavyweight materials such as steel, balance must be achieved to guarantee safety. This can be achieved by counterweight systems or spring balance cylinders.

The global LNG Cryogenic Loading Arm market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
