LNG Marine Cryogenic Valves are valves specially designed for use on liquefied natural gas (LNG) carriers. These valves are able to operate normally in extremely low temperature environments (usually below -160°C) and can effectively control and isolate the flow of LNG. Due to the high flammability and cryogenic characteristics of LNG, these valves must have excellent sealing and low temperature resistance to ensure the safety and reliability of the transportation process.

The global LNG Marine Cryogenic Valves market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
