The global LNG Mobile Refueling Station market size is predicted to grow from US\$ 661 million in 2025 to US\$ 850 million in 2032; it is expected to grow at a CAGR of 3.7% from 2026 to 2032.

LNG Mobile Refueling Stations, also known as Liquefied Natural Gas Mobile Refueling Stations, are mobile facilities designed to dispense LNG to vehicles or other gas-consuming equipment.

When a vehicle needs to be refueled, the refueling nozzle is first connected to the vehicle's LNG fuel tank. Then, through the control system, the LNG pump is started. The LNG pump extracts LNG from the storage tank and pressurizes it. The pressurized LNG is then dispensed through the refueling nozzle into the vehicle's fuel tank. During this process, the dispenser measures the refueling quantity in real-time. At the same time, the vapor return system handles the gas returned from the vehicle's fuel tank. After the refueling is completed, the refueling nozzle valve is closed, the LNG pump is stopped, and the connection between the refueling nozzle and the vehicle's fuel tank is disconnected, thus completing the refueling process.
