The global Load Balance Router market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

On a network, servers and nodes typically have limited computing and storage capabilities. Due to unbalanced traffic forwarding, some servers and nodes may be overloaded while others are relatively idle. This reduces the network's computing and storage capabilities and can lead to a single point of failure. In order to maximize the utilization of these capabilities of servers and nodes while ensuring the stability and security of the system, load balancing is introduced. This report studies routers with load balancing capabilities.
