## Abstracts

The global Load Moment Limiter market size is predicted to grow from US\$ 891 million in 2025 to US\$ 1188 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

A load moment limiter is a safety control device used in lifting and rotating equipment to monitor load weight and working radius (or boom length) in real time and calculate the load moment. When the calculated value reaches or exceeds the rated moment, it triggers alarms or restricts equipment operation to prevent tipping or structural instability. It serves as a critical component of crane safety systems by providing dynamic operational monitoring.

Upstream includes load sensors, angle or length sensors, signal acquisition and control modules, display units, and electrical connection components. Downstream applications include tower cranes, truck-mounted cranes, crawler cranes, and other large construction machinery. The overall industry gross margin generally ranges from 30% to 50%, with higher margins for intelligent and high-precision integrated systems.

In 2025, the global production of load moment limiters is estimated at 217,000 units, with an average price of \$4,200 per unit.

United States market for Load Moment Limiter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
