Local anesthetics are commonly used in the department of stomatology, ophthalmology, gynecology and some minor surgeries to temporarily relieve pain. The fundamental difference between local anaesthesia and general anaesthesia lies in that after the combination of local anaesthesia with some specific parts of the sodium ion channel on the nerve membrane, the sodium ion in the sodium ion channel decreases so as to change the nerve membrane potential, causing the conduction of nerve impulse to be blocked, and finally realize the anesthetic effect. General anesthesia, on the other hand, works by affecting the physical properties of the membrane, such as the fluid and permeability of the membrane.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for

drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
