LOC VOC is a pan-semiconductor cleanroom EHS treatment device used to treat VOC gas dispersed in the cleanroom to ensure the occupational health and safety of production employees. The circulating air in certain areas of the pan-semiconductor industry production workshop contains a certain amount of volatile VOCs gas, which affects occupational health and product yield. The gas containing VOCs passes through the zeolite, the VOCs are adsorbed, and the clean gas is discharged to the workshop. The high-temperature gas with a small air volume desorbs high-concentration VOCs from the zeolite and is discharged to the VOCs central processing device. Centralized treatment meets emission standards, which helps to improve the product yield of the customer's process.
