Log Average Power Detectors are devices used to measure and monitor the average power of a signal over a logarithmic scale. These detectors are particularly useful in applications where the signal varies widely in amplitude, such as in wireless communication systems, RF circuits, and signal processing. By providing a logarithmic response, they enable accurate power measurements across a broad dynamic range, ensuring reliable performance in environments with fluctuating signal strengths.

The global Logarithmic RF Power Detectors market size is projected to grow from US\$ 155 million in 2024 to US\$ 204 million in 2030; it is expected to grow at a CAGR of 4.7% from 2024 to 2030.
