The global Logarithmic RMS Detector market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A logarithmic RMS detector is a device used for power measurements that is particularly suitable for making waveform-independent power measurements over a wide dynamic range. It is capable of measurements over a dynamic range of up to 70dB and has the same output voltage change for every dB change in RF input power, enabling accurate measurement of complex high crest factor waveforms. The logarithmic RMS detector interfaces with a medium-resolution analog-to-digital converter to achieve accurate digital representation. Its output voltage has a logarithmic relationship with the input power and is suitable for various wireless communication systems, measurement equipment, military equipment, etc.

United States market for Logarithmic RMS Detector is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
