The global Logic Data Selectors market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

In digital electronics, logic data selectors (multiplexers) can “select” each input line, are constructed from individual Analogue Switches encased in a single IC package as opposed to the “mechanical” type selectors such as normal conventional switches and relays.

The rapid growth of Internet speed and bandwidth-hungry applications is increasing the penetration of fiber optic networks in the access network space. Optical networks provide support for existing and emerging backbone networks. The growing demand for massive data transmission capacity and increasing internet traffic is expected to exhibit future growth in the global multiplexer market as consumer demand for network bandwidth and enhanced technologies grows.
