The global Logic Level Converter Module market size is predicted to grow from US\$ 1883 million in 2025 to US\$ 2324 million in 2032; it is expected to grow at a CAGR of 3.1% from 2026 to 2032.

A Logic Level Converter Module is an electronic device used to safely interface between components that operate at different voltage levels. It is commonly used in circuits where different parts of a system (like microcontrollers, sensors, or communication modules) operate at different logic levels, such as 3.3V and 5V.

A logic level converter or logic level shifter is a necessary circuit while interfacing devices with different voltage requirements. Logic level converter steps up or steps down the voltage as per the requirement of a device.
