The global Logic Level Shifters market size is predicted to grow from US$ 988 million in 2025 to US$ 1223 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

Logic Level Shifter is a circuit used to translate signals from one logic level or voltage domain to another, allowing compatibility between integrated circuits with different voltage requirements.

A level converter helps solve this problem by converting the voltage levels of digital signals from one voltage range to another, ensuring proper communication and interaction between different components. It is commonly used when interfacing devices that operate at different logic voltage levels, such as microcontrollers, sensors, memory chips, and communication modules.
