Logistics Dimension Weight Scanning System (DWS) is an intelligent automation device that integrates dimensioning, weighing and scanning functions. It obtains the three-dimensional dimensions of the package through laser scanning, 3D vision and other technologies, and combines high-precision weighing sensors with barcode scanners to simultaneously collect volume, weight and barcode information, and upload it to the logistics management system in real time. The system can complete the volume measurement, weighing, barcode scanning, photo evidence collection and data docking of the package at one time, supports regular/irregular package processing, and significantly improves logistics operation efficiency and data accuracy.
