Abstracts

The global Long-acting Melatonin Receptor Agonists market size is predicted to grow from US$ 452 million in 2025 to US$ 702 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Long-acting melatonin receptor agonists are prescription medicines containing melatonin and formulated with prolonged-release, extended-release, or controlled-release technologies to extend overnight drug release and MT1 and MT2 receptor activity. Commercial products mainly include 2 mg prolonged-release tablets for adults and 1 mg or 5 mg prolonged-release minitablets for pediatric patients. Major indications include primary insomnia and insomnia associated with autism spectrum disorder, Smith-Magenis syndrome, other neurogenetic disorders, and selected pediatric attention-deficit hyperactivity disorder populations. Upstream inputs mainly include pharmaceutical-grade melatonin, modified-release matrix materials, methacrylate copolymers, cellulose derivatives, fillers, coating materials, blister packs, and pharmaceutical bottles. Downstream customers mainly include sleep medicine centers, psychiatric departments, pediatric departments, neurodevelopmental disorder clinics, hospital pharmacies, retail pharmacies, and specialty pharmacies. The market is centered on prescription prolonged-release formulations. Originator pediatric products retain relatively high added value, while adult 2 mg prolonged-release tablets face increasing generic competition, with an overall gross margin generally ranging from approximately 48% to 72%.

From the current market perspective, the long-acting melatonin receptor agonist market consists mainly of adult 2 mg prolonged-release melatonin products and pediatric prolonged-release formulations. The adult segment is concentrated in primary insomnia among older patients and includes both originator and generic products. Pediatric

products primarily address insomnia associated with autism spectrum disorder, neurogenetic diseases, and other neurodevelopmental disorders. These populations are smaller but require more specialized diagnosis and treatment, supporting higher unit values for branded pediatric formulations.

Looking ahead, development will increasingly focus on pediatric dosage forms, minitablets, easy-to-swallow formulations, and more consistent overnight release profiles. Manufacturers will optimize release rates, overnight exposure, morning residual effects, and dosing for different age and weight groups. Generic penetration will continue to increase in the adult 2 mg segment, while pediatric products will rely more heavily on proprietary formulations, indication expansion, and specialist promotion.

Key market drivers include population aging, increasing recognition of sleep disorders, improved diagnosis of pediatric neurodevelopmental conditions, and greater physician acceptance of non-GABAergic insomnia treatments. These products are generally not controlled substances and have lower abuse and physical-dependence risks than benzodiazepines and Z-drugs, making them suitable for patients requiring longer treatment or unable to tolerate conventional sedative-hypnotics. Expansion into autism, ADHD, and neurogenetic disorder-related insomnia will create additional prescription demand.

The main constraints include relatively modest clinical efficacy in some patients and variable improvement in sleep onset and maintenance. Low-priced and widely available over-the-counter immediate-release melatonin products create substantial substitution pressure. Regulatory classification of melatonin as a medicine, food, or dietary supplement differs by country, resulting in inconsistent reimbursement, prescribing, and market-access conditions. Generic competition and reimbursement controls will also continue to reduce average selling prices in the adult segment.

LPI (LP Information)' newest research report, the “Long-acting Melatonin Receptor Agonists Industry Forecast” looks at past sales and reviews total world Long-acting Melatonin Receptor Agonists sales in 2025, providing a comprehensive analysis by region and market sector of projected Long-acting Melatonin Receptor Agonists sales for 2026 through 2032. With Long-acting Melatonin Receptor Agonists sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Long-acting Melatonin Receptor Agonists industry.

This Insight Report provides a comprehensive analysis of the global Long-acting Melatonin Receptor Agonists landscape and highlights key trends related to product

segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyses the strategies of leading global companies with a focus on Long-acting Melatonin Receptor Agonists portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Long-acting Melatonin Receptor Agonists market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Long-acting Melatonin Receptor Agonists and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Long-acting Melatonin Receptor Agonists.

This report presents a comprehensive overview, market shares, and growth opportunities of Long-acting Melatonin Receptor Agonists market by product type, application, key players and key regions and countries.

2 EXECUTIVE SUMMARY

2.1 World Market Overview
  2.1.1 Global Long-acting Melatonin Receptor Agonists Market Size (2021-2032)
  2.1.2 Long-acting Melatonin Receptor Agonists Market Size CAGR by Region (2021 VS 2025 VS 2032)
  2.1.3 World Current & Future Analysis for Long-acting Melatonin Receptor Agonists by Country/Region (2021, 2025 & 2032)
2.2 Long-acting Melatonin Receptor Agonists Segment by Type
  2.2.1 1 mg
  2.2.2 2 mg
  2.2.3 5 mg
  2.2.4 Other
  2.2.5 Long-acting Melatonin Receptor Agonists Market Size by Type
    2.2.5.1 Long-acting Melatonin Receptor Agonists Market Size CAGR by Type (2021 VS 2025 VS 2032)
    2.2.5.2 Global Long-acting Melatonin Receptor Agonists Market Size Market Share by Type (2021-2026)
2.3 Long-acting Melatonin Receptor Agonists Segment by Product Status
  2.3.1 Originator Drug
  2.3.2 Generic Drugs
  2.3.3 Long-acting Melatonin Receptor Agonists Market Size by Product Status
    2.3.3.1 Long-acting Melatonin Receptor Agonists Market Size CAGR by Product Status (2021 VS 2025 VS 2032)
