The global Long-acting Polypeptide Fatty Acid Side Chain market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Long-acting polypeptide fatty acid side chains are a technology that extends the half-life of polypeptide molecules in the body by introducing fatty acid side chains into them. By binding to polypeptides, fatty acid side chains can increase their affinity with plasma proteins (such as albumin), reduce renal clearance, and thus prolong the existence time of polypeptides in the blood. This modification technology is widely used in the development of long-acting drugs, such as polypeptide drugs for the treatment of chronic diseases such as diabetes and obesity, to reduce the frequency of medication and improve patient compliance and treatment effects.

United States market for Long-acting Polypeptide Fatty Acid Side Chain is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
