The global Long-arm Pump Truck market size is predicted to grow from US$ 689 million in 2025 to US$ 941 million in 2032; it is expected to grow at a CAGR of 4.6% from 2026 to 2032.

Long-arm pump trucks refer to pump trucks with a longer boom after the boom is unfolded. Generally speaking, pump trucks with a boom length of more than 50 meters are called long-arm pump trucks. These pump trucks are mainly used for concrete transportation and play an important role in high-rise building construction and large-scale engineering projects. The advantage of long-arm pump trucks is that they have a larger construction range and can cover a wider area, thereby reducing the number of times the pump is moved during construction and improving construction efficiency. However, as the length of the boom increases, the number of sections and structural forms of the boom will become more complex, and the difficulty of operation will increase accordingly.

United States market for Long-arm Pump Truck is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
