Abstracts

The global Long Carbon Nylon market size is predicted to grow from US$ 2854 million in 2025 to US$ 3562 million in 2031; it is expected to grow at a CAGR of 3.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Long Carbon Nylon, often referred to as long-chain nylons, are polyamides with 10 or more carbon atoms in their repeating units. These polymers are characterized by a low amide bond density, resulting in lower water absorption, better dimensional stability, and enhanced ductility compared to their shorter-chain counterparts. Examples include Nylon 610, Nylon 612, Nylon 1012, Nylon 11 and Nylon 12.

Technological breakthroughs and domestic substitution are accelerating

Breakthrough in high-end material technology barriers: Huitong Co., LTD. 's nylon 612 material has a melting point of 215?, has passed the certification of new energy vehicle manufacturers and achieved batch supply, breaking the overseas monopoly. Wanhua Chemical's 40,000-ton/year nylon 12 production capacity has become the first industrialized project in China. The quoted price for the butadiene synthesis method is 53,500 yuan per ton.

Research and development of bio-based materials: The proportion of green materials such as castor oil-based nylon 11 and nylon 1012 has increased.

The application scenarios continue to expand

The core components of new energy vehicles: The penetration rate of nylon 12 in battery coolant pipelines exceeds 70%, and the application proportion of nylon 12 in European automotive hoses is over 50%.

Energy storage and hydrogen energy systems: The demand for long-chain nylon in the inner liner of hydrogen storage bottles and liquid cooling pipelines is increasing by more than 15% annually, and its resistance to ethylene glycol hydrolysis has become a key technical factor.

The lightweighting of automobiles (with a 35% weight reduction target by 2030) and the demand for wind power equipment will become the core growth drivers of the long-carbon chain nylon market.
