The global Long-endurance Hotel Delivery Robot (?8h) market size is predicted to grow from US$ 222 million in 2025 to US$ 360 million in 2031; it is expected to grow at a CAGR of 8.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The long-endurance hotel delivery robot (? 8 hours) is an automated service equipment designed specifically for hotel scenarios. Its core advantage lies in its ability to achieve all-weather continuous operation through energy-optimized design and efficient power system. The robot is usually equipped with a high-capacity lithium-ion battery or hydrogen fuel cell, with a low-power hardware architecture (such as energy-saving SLAM navigation module, servo motor) and an intelligent power management system. It can run continuously for more than 8 hours when fully charged, meeting the hotel's morning, noon, evening peak and night delivery needs. The body design takes into account both endurance and functionality, equipped with a dual-temperature cargo compartment with insulation/refrigeration, and an automatic charging docking module. When the power is below the threshold, it can return to the charging station to recharge without manual intervention. Its navigation system mostly uses laser SLAM or visual SLAM technology to ensure positioning accuracy during long-term operation. At the same time, it integrates anti-collision sensors and elevator linkage functions, which can stably perform food and goods delivery tasks in complex hotel environments. This type of robot is particularly suitable for large hotel chains, 24-hour service hotels or high-traffic scenarios. It can extend battery life and reduce charging frequency, thereby improving service continuity and operational efficiency, while reducing labor costs and
