## Abstracts

According to this study, the global Long Non-Coding RNA Sequencing Service market size will reach US\$ 1381 million by 2031.

Long Non-Coding RNA (lncRNA) Sequencing Service is a next-generation sequencing (NGS)-based molecular biology service designed to comprehensively detect and analyze long non-coding RNAs—transcripts longer than 200 nucleotides that do not encode proteins but play crucial roles in gene regulation, chromatin remodeling, cell differentiation, and disease pathogenesis. This service involves extracting total RNA, depleting rRNA or mRNA, constructing lncRNA-enriched libraries, performing deep sequencing, and conducting bioinformatics analysis including differential expression profiling, novel lncRNA prediction, target gene analysis, and functional annotation. It is widely used in cancer research, neurological disorders, immune regulation, stem cell biology, and personalized medicine.
