In a solid state battery, the liquid electrolyte and separator often are replaced by a polymer or ceramic. Long-range automotive semi-solid battery packs are a variation of that, typically composed of a solid, conductive material suspended in a liquid electrolyte to help ease the movement of the lithium ions. Semi-solid electric vehicle battery packs have the strengths of liquid and solid and do not require much change in the conventional battery manufacturing process. Therefore, they can be commercialized faster than solid-state batteries even while they have higher safety than lithium-ion batteries.

The global Long-Range Automotive Semi-Solid Battery Pack market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
