The global Long-Term Post-Acute Care (LTPAC) Software market size is predicted to grow from US$ 766 million in 2025 to US$ 1111 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Long-term post-acute care (LTPAC) software helps healthcare providers manage care for patients who need ongoing support after leaving the hospital. These solutions are used by skilled nursing facilities, long-term acute care hospitals, inpatient rehabilitation centers, or home-based providers with health and hospice services. LTPAC software helps clinical teams communicate across healthcare environments throughout the patient journey, manage therapy and nursing, handle referrals from hospitals, and keep track of medical records and billing.This software helps healthcare organizations provide effective, compliant, and cost-efficient post-acute care. It integrates with hospital electronic health records (EHR), insurance systems, and other specialized tools. LTPAC software helps address challenges with keeping care consistent, ensuring accurate billing, and reducing compliance risks. It also supports goals such as value-based care, quality reporting, and seamless care transitions.

The current market for long-term post-acute care (LTPAC) software is at a critical stage of transitioning from basic informatization to intelligent collaborative platforms. Its core value is no longer confined to resident record management and order execution tracking, but has extended to deep application scenarios such as cross-organizational care coordination, clinical risk prediction, personalized rehabilitation pathway planning, and real-time quality indicator monitoring. The market as a whole shows characteristics of “integration” and “agility,” meaning that software systems must simultaneously interface with acute-care hospitals, rehabilitation facilities, home care, and community resources to form a closed-loop continuum of care data, while also responding rapidly to

evolving payment policies and regulatory requirements. At the same time, users are placing higher demands on intuitive operation experience and mobile accessibility, driving software design to shift from “feature-driven” to “care-process-driven,” so as to genuinely support frontline care teams in clinical decision-making and workflow efficiency.
