The global Long?Cell Battery Can For Energy Storage market size is predicted to grow from US$ 68.48 million in 2025 to US$ 284 million in 2032; it is expected to grow at a CAGR of 22.7% from 2026 to 2032.

Long?Cell Battery Can For Energy Storage refers to the metal enclosure used for long-format, large-size prismatic lithium-ion cells in energy storage systems. It primarily provides cell packaging, mechanical protection, structural support, and safety protection. These cases are typically made from aluminum alloys such as 3003 or 3005 and manufactured through deep drawing, extrusion, high-frequency welding, or roll-forming and welding processes. Key characteristics include extended length, thin wall thickness, high dimensional accuracy, good weldability, and corrosion resistance. Compared with conventional prismatic cell cases, Energy Storage Long Cell Battery Cases place greater emphasis on compatibility with large-capacity cells, forming stability over long dimensions, and high-volume manufacturing consistency. Some products also integrate bottom venting, pressure-relief, or reinforcement structures. They are mainly used in generation-side energy storage, grid-side energy storage, commercial and industrial energy storage, and other stationary energy storage systems, and are important precision structural components for large-capacity lithium iron phosphate energy storage cells.Energy Storage Long Cell Battery Cases are typically made from 3003, 3005, and other aluminum alloys. Pricing is mainly affected by case length, wall thickness, forming process, explosion-proof structure, and procurement volume. Mass-production prices for conventional large-size long cell battery cases generally range from approximately USD 2.0–4.0 per unit, while ultra-long, ultra-thin-wall, high-frequency welded, or integrated explosion-proof products can reach approximately USD 4.0–6.0 per unit.
