Loop-mediated isothermal amplification, also known as LAMP, is a simple and cost-effective nucleic acid amplification technique that does not require expensive instruments and helps ensure rapid results and easy outcome interpretation. The technique is cost effective because it is carried out at a constant temperature and does not require a thermal cycler or other expensive equipment. LAMP is used for the detection of various pathogens, including bacteria, viruses, and protozoans that may cause food contamination and plant disease. In this report, we focus on Loop-mediated Isothermal Amplification Kit for Medical Diagnosis.
