A loop surge protector is a device used to protect electrical circuits from surge voltages and currents. It is usually used in power systems, communication systems, computer networks and other electronic equipment to prevent damage to circuits and equipment caused by overvoltage and overcurrent caused by lightning strikes, power failures, motor starting, etc. Loop surge protectors protect circuits primarily by limiting and absorbing surge voltages and currents. When a surge voltage or current occurs in the circuit, the loop surge protector will respond quickly and guide the overvoltage or overcurrent to the ground or other safe path to protect the circuit and equipment from damage. Loop surge protectors are usually composed of reusable components such as gas discharge tubes, diodes, metal oxide varistors, etc. Loop surge protectors have the characteristics of fast response, high withstand voltage, and low voltage discharge. It

can effectively protect circuits and equipment from surge voltage and current, reduce the occurrence of faults and damage, and improve system reliability and stability. Loop surge protectors are widely used in power systems and communication systems. It can be used to protect power lines, communication lines, data lines, signal lines, etc. to prevent damage to equipment caused by surge voltages and currents caused by lightning strikes, power failures, motor starts and other factors. At the same time, loop surge protectors can also be used to protect electronic equipment such as computers, servers, network equipment, and industrial control equipment to ensure their normal operation and long life.
