The global Low Altitude Economic Transportation market size is predicted to grow from US$ 3699 million in 2025 to US$ 9339 million in 2032; it is expected to grow at a CAGR of 14.4% from 2026 to 2032.

Low-altitude economic transportation means all types of vehicles that operate in airspace at relatively low altitudes (specific altitude thresholds vary by region and relevant regulations) for the economical and efficient transportation of people, goods or services. Low-altitude economic transportation vehicles mainly include helicopters, drones and flying cars, of which flying cars in a broader sense include eVTOL (electric vertical take-off and landing vehicle) and land-air amphibious vehicles. This type of transportation is designed to provide diverse and cost-effective transportation for inter-regional movement of people and goods through the use of flight equipment better suited to low-altitude environments, relatively low operating costs (e.g., in terms of fuel consumption, maintenance, and, in some cases, no need for crew), flexibility in routing and scheduling (small airports or even temporary landing sites can be used), and faster speeds compared to ground transportation. It provides a diverse and cost-effective mode of transportation that meets the needs of various application scenarios, such as regional connectivity, on-demand travel, and end-of-pipe distribution.

United States market for Low Altitude Economic Transportation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Low Altitude Economic Transportation is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
