The global Low-altitude Economy Air Management System market size is predicted to grow from US$ 3980 million in 2025 to US$ 14240 million in 2032; it is expected to grow at a CAGR of 20.4% from 2026 to 2032.

The air management system is a comprehensive system, usually referred to as the CNS/ATM system, covering multiple aspects such as communication, navigation, surveillance and air traffic management. Among them, communication, navigation and surveillance (CNS) as peripheral facilities ensure the transmission of information, determination of location and monitoring of status. The air traffic management system (ATM) is the brain of this system, which is responsible for processing and analyzing this information to effectively manage the flow of air traffic. This report focuses on the low-altitude economy air management system. In the low-altitude economy field, the number of aircraft and the complexity of scheduling far exceed traditional civil aviation or general aviation. Therefore, in order to meet these challenges, both CNS peripheral equipment and information processing systems need to be adjusted and optimized accordingly.
