The global Low-code App Builder market size is predicted to grow from US\$ 17834 million in 2025 to US\$ 44208 million in 2032; it is expected to grow at a CAGR of 13.9% from 2026 to 2032.

Low-code App Builders are software platforms that enable application development through visual modeling, reusable components, and limited manual coding. They are designed to accelerate development while still allowing professional developers to customize logic, integrations, and user interfaces through code. Compared with no-code platforms, low-code app builders target more complex enterprise applications, supporting scalability, extensibility, and integration with existing IT systems.

The market is primarily driven by enterprises seeking to reduce development cycles, address developer shortages, and modernize legacy systems. Low-code app builders are widely used for internal business applications, workflow automation, customer portals, and industry-specific solutions in sectors such as finance, manufacturing, healthcare, and government. Their flexibility makes them suitable for both rapid prototyping and production-grade deployments.

The cost structure is dominated by software R&D, cloud hosting, platform maintenance, and customer support. Compared with traditional custom development tools, low-code platforms benefit from subscription-based revenue models and strong user retention. Leading vendors typically achieve high gross margins, often ranging from 65% to 85%, depending on scale, cloud efficiency, and enterprise pricing strategies.

Key trends include deeper integration of AI-assisted development, stronger governance and security features, and growing adoption in regulated industries. As enterprises

continue to prioritize agility and cost efficiency, low-code app builders are expected to maintain steady double-digit growth, evolving into core components of enterprise application development and digital transformation strategies.
