The global Low Density Polyethylene Resin for Blown Film Extrusion market size is predicted to grow from US$ 539 million in 2025 to US$ 727 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

In 2024, global Low Density Polyethylene Resin for Blown Film Extrusion production reached approximately 455 kilotons?with an average global market price of around US$ 1150 per ton. Low Density Polyethylene (LDPE) resin for blown film extrusion is a thermoplastic polymer produced by the high-pressure polymerization of ethylene. It is characterized by a branched molecular structure that gives it low density (typically 0.915–0.935 g/cm?), high flexibility, excellent clarity, and good processability. In blown film extrusion, LDPE resin is melted and extruded through a circular die, then expanded into a thin tubular film by air pressure before being cooled and wound. This process produces films with uniform thickness, good sealability, and superior optical properties, making LDPE a preferred material for packaging films. Its unique balance of toughness, softness, and resistance to moisture and chemicals ensures reliable performance across a wide range of packaging and industrial applications.
