The global Low Dropout Voltage Controllers market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A low dropout voltage controller is an electronic device commonly used in DC power systems to control the output voltage of a DC power supply. LVDC can monitor the voltage difference in the DC circuit and automatically adjust the output voltage through the feedback circuit to maintain the required voltage level. Its working principle is based on comparing the difference between the input voltage and a reference voltage, and then adjusting the output voltage by controlling the electronic components in the circuit, such as transistors or field effect transistors. LVDC is commonly used in DC power systems such as solar panels, wind turbines, and generators to maintain output voltage stability and consistency. They can also be used in battery charge controllers, motor drives, renewable energy systems, and other applications.
